

## NIHR Global Health Research Group on Neurotrauma

### AUTHORSHIP POLICY

#### 1. Authorship

In order to be included as an **Author** of an output produced as part of the NIHR Global Health Research Group on Neurotrauma Research Programme the following conditions need to be met:

- Substantial contributions to the conception or design of the work, or the acquisition, analysis or interpretation of data.
- Drafting the work or revising it critically for important intellectual content.
- Final approval of the version published.
- Agreement to be accountable for all aspects of the work in ensuring that questions related to the accuracy or integrity of any part of the work are appropriately investigated and resolved.

Participation solely in the acquisition of funding, the collection of data or general supervision of the research group does not justify authorship.

Any individuals listed as co-authors on a manuscript will receive email confirmation of the manuscript submission.

#### 2. Acknowledging contributors

- All contributors who have contributed materially to the paper but whose contributions do not justify authorship may be listed as **Collaborators**, and their contribution should be described clearly in the contributorship statement – for example, “served as scientific advisors”, “critically reviewed the study proposal”, “collected data” or “provided and cared for study patients”. The aim would be to add Collaborators on the PubMed record provided that this practice is acceptable by the publisher the output is submitted to.
- Financial support should also be acknowledged and the following phrase should be used:

*“This research was commissioned by the National Institute of Health Research using Official Development Assistance (ODA) funding. The views expressed in this publication are those of the author(s) and not necessarily those of the NHS, National Institute for Health Research or the Department of Health.”*

### 3. Group authorship

For outputs which are the result of work of the group as a whole, along the names of individual authors fulfilling the authorship criteria the name of the group - *NIHR Global Health Research Group on Neurotrauma* - would also be included, provided that this practice is acceptable by the publisher the output is submitted to.

### 4. Contributorship statement

A contributorship statement should outline who has contributed what to the planning, conduct, and reporting of the work described in the article. This should include both authors and contributors.
